

WORDFAST

Adding a Remote TM and Glossary in Wordfast Pro 4

To add a remote TM:

1. First, you must obtain a remote TM URL (from your client or LSP). This URL looks something like this:
wf://account:password@10.11.12.13:47110/1234567890
It contains the following information:
 - a. Account Name and Password (e.g. account:password)
 - b. IP address (e.g. 10.11.12.13)
 - c. Port# (usually 47110 by default)
 - d. Optional workgroup ID (e.g. 1234567890)
2. In WFP, use the advanced project wizard to create a project.
3. In Step 2 of the wizard, make sure the language pair matches the language pair of your remote TM.
4. In Step 4, click on the *Add Remote* icon.
5. Click on the *WF Server* tab.
6. Paste the URL into the *URL* field.
7. Give the TM a name of your choice in the *Symbolic Name* field.
8. Click *OK*. You should get a message that says “Connection successful.”

Connect to Remote TM

Use this page to connect to remote TM.

TM Server | **WF Server**

Symbolic Name:* EN_FR

URL Settings

URL:* wf://account:password@10.11.12.13 Test

Address:* 10.11.12.13
