Adding a Remote TM and Glossary in Wordfast Pro 3

To add a remote TM:

1. First, you must obtain a remote TM URL (from your client or LSP). This URL looks something like this:
   wf://account:password@10.11.12.13:47110/1234567890
   It contains the following information:
   a. Account Name and Password (e.g. account:password)
   b. IP address (e.g 10.11.12.13)
   c. Port# (usually 47110 by default)
   d. Optional workgroup ID (e.g. 1234567890)

2. In WFP, create or open a project that matches the language pair of your remote TM.
3. Go to New/Select TM to get to the TM List.
4. Click *Add TM*.
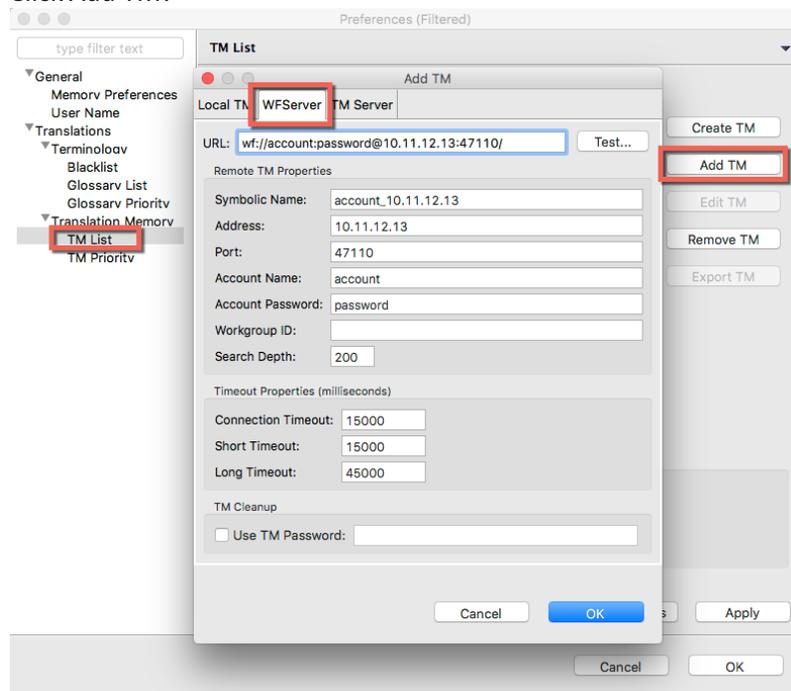

5. Click on the *WFServer* tab.
6. Paste the URL into the *URL* field. Press the tab key and the other fields will fill in automatically.
7. Give the TM a name of your choice in the *Symbolic Name* field (optional).
8. Click *OK*. You should get a message that says "Connection established successfully."

To add a remote Glossary:

1. Go to Terminology > New/Select Glossary to get to the Glossary List.
2. Click *Add*.
3. Go to the *WFServer* tab.
4. Paste the URL into the *URL* field. Press the tab key and the other fields will fill in automatically.
5. Give the glossary a name of your choice in the *Symbolic Name* field (optional).
6. Click *OK*. You should get a message that says "Connection established successfully."
